Theorem

The Fundamental Theorem of Finite Abelian Groups: *Every finite abelian group is the direct sum of cyclic groups of prime power order.*

Strategy

Theorem

The Fundamental Theorem of Finite Abelian Groups: *Every finite abelian group is the direct sum of cyclic groups of prime power order.*

1. In any group, the set of elements whose order is a power of a given prime p is a subgroup of that group, denoted $G(p)$.

Strategy

Theorem

The Fundamental Theorem of Finite Abelian Groups: *Every finite abelian group is the direct sum of cyclic groups of prime power order.*

1. In any group, the set of elements whose order is a power of a given prime p is a subgroup of that group, denoted $G(p)$.
2. In abelian groups, each element of finite order is a sum of elements of prime power order.
