

Representing PC-231 integers inside a Java int(eger)

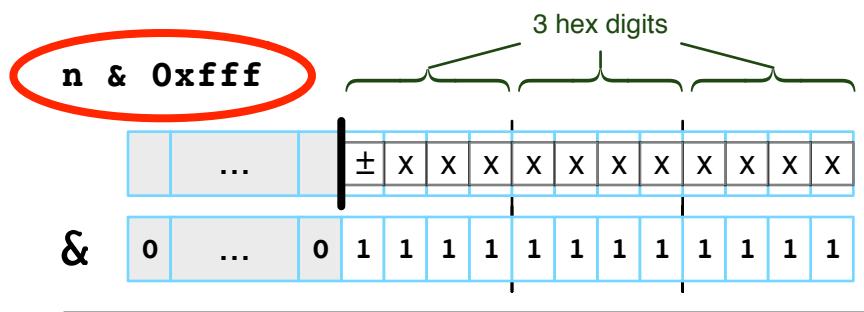

A 32-bit Java int (in two's complement form)

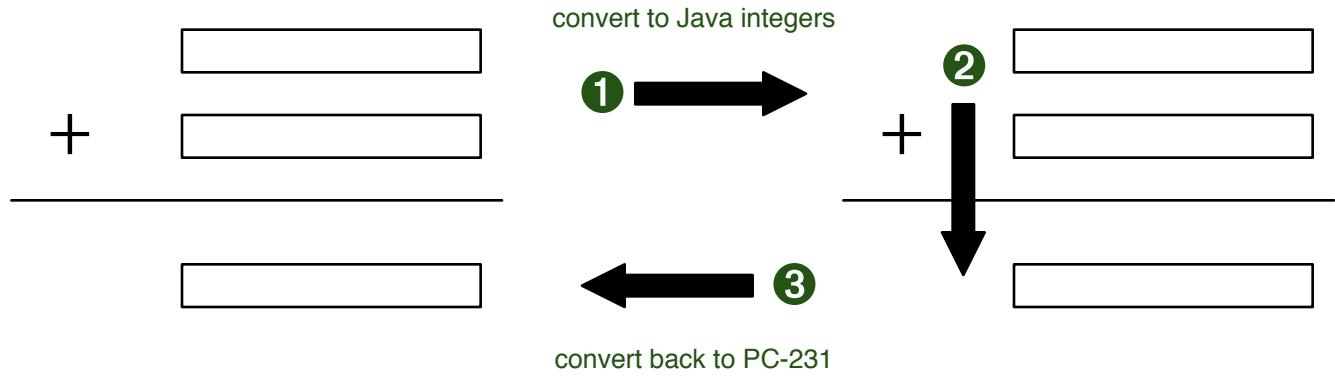

A 12-bit PC-231 integer (in sign-magnitude form)

“Sanitizing” a PC-231 *value* (*not just integers*) rep’ed in a Java integer

To add two PC-231 integers:

Conversion code for PC-231 to Java and back again

```
int n;          // PC-231 integer
int i;          // Java    integer

...
i = (n>2048 ? -1 : 1) * (n & 0x7ff);      // PC-231 ==> Java

n = (i<0 ? 2048 : 0) + (Math.abs(i) & 0x7ff); // back
```
