

• For any event A,  $0 \le P(A) \le 1$ .

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

 $P(A) = \frac{\text{The number of outcomes in } A}{\text{The number of total outcomes}}.$ 

• P(something happens) = 1.

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$
- If A and B are independent, P(A and B) = P(A)P(B).

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$
- If A and B are independent, P(A and B) = P(A)P(B).
- P(A or B) = P(A) + P(B) P(A and B) whether or not A and B are disjoint.

8

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$
- If A and B are independent, P(A and B) = P(A)P(B).
- P(A or B) = P(A) + P(B) P(A and B) whether or not A and B are disjoint.

$$P(B ext{ given } A) = P(B|A) = rac{P(A ext{ and } B)}{P(A)}.$$

8

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

 $P(A) = \frac{\text{The number of outcomes in } A}{\text{The number of total outcomes}}.$ 

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$
- If A and B are independent, P(A and B) = P(A)P(B).
- P(A or B) = P(A) + P(B) P(A and B) whether or not A and B are disjoint.

$$P(B ext{ given } A) = P(B|A) = rac{P(A ext{ and } B)}{P(A)}.$$

P(A and B) = P(A)P(B|A) = P(B)P(A|B) whether or not A and B are independent.

8

• For any event A,  $0 \le P(A) \le 1$ .

When each outcome is equally likely,

- P(something happens) = 1.
- If A and B are disjoint, P(A or B) = P(A) + P(B).
- $P(A \text{ doesn't happen}) = P(A^C) = 1 P(A).$
- If A and B are independent, P(A and B) = P(A)P(B).
- P(A or B) = P(A) + P(B) P(A and B) whether or not A and B are disjoint.

$$P(B ext{ given } A) = P(B|A) = rac{P(A ext{ and } B)}{P(A)}.$$

- P(A and B) = P(A)P(B|A) = P(B)P(A|B) whether or not A and B are independent.
- A and B are independent exactly when P(B|A) = P(B) and P(A|B) = P(A).
